ANSI/NSF 18

FREEPOUR

Wireless Accountability

Drinks are measured & rung up on your register as they are dispensed directly from the bottle!

- **EASY:** Easybar FREEPOUR spouts contain a microprocessor that automatically counts and measures drinks as they are poured while allowing the bartender to pour as much or as little as desired.
- **INFORMATIVE:** Our FREEPOUR system includes a receiver mounted near the bar that collects all pouring information as it happens. The receiver can be polled by itself or with a computer to show number of drinks and the amounts poured. Add interfacing and the Easybar FREEPOUR system will ring up compatible point-of-sale systems (Micros, Infogenesis, Aloha, etc) simply by dispensing a drink.
- **FLEXIBLE:** A programmable LED indicator light can be set to blink in half-ounce increments, or can be disabled if not wanted.
- **SAFE:** Easybar FRE-SP is certified to ANSI/NSF 18.
- **TOTAL CONTROL!** Use Easybar FREEPOUR alone to track unlimited bottles OR add other Easybar dispensers (liquor gun, beer controls, etc) for complete control and accountability.

**Portion Controlled Beverage Dispensing for
Liquor · Beer · Wine · Soda · Juice**

19799 SW 95th Avenue Suite A • Tualatin, OR 97062 • 503-624-6744 • www.easybar.com

**FREEPOUR with
ACCOUNTABILITY!**

TO SERVE A PRODUCT with EASYBAR FREEPOUR:

- Pour any size drink from any bottle fitted with the FREEPOUR spout.
- When the pour is completed, a radio-signal is automatically sent to the bar-mounted receiver. If the FREEPOUR system is interfaced, the drink will automatically ring up on your point-of-sale system.
- Scan the reader at any time to print all pouring information - including pour sizes, number of pours, and inventory information - on a digital readout, printer or computer.

EQUIPMENT DESCRIPTION & FUNCTION:

Easybar FREEPOUR is for any bar that wants to show complete freepour but also account for dispensing activity without a lot of maintenance.

Our FREEPOUR spouts can be programmed by brand and adjusted to measure liquids of varying viscosities. The LED light on each spout can be set to blink for every 1/2 ounce to guide the bartender, or be turned off if desired. There is also a built-in security switch that will alert the receiver if a spout is removed from the bottle.

When a drink is poured, the spout sends a radio signal to the receiver which then stores each drink by brand, pour size and date / time poured. You can check the readings at any time to see who is pouring what - and how much - for easy and unobtrusive inventory, management and bartender management. Point-of-Sale interfacing automatically rings up each pour on the register to make sure every drink dispensed is charged and accounted for.

The **Easybar**® family of dispensing equipment includes...

Liquor & soda gun systems...

Cocktail server stations ...

Controlled backbar systems...

Beer & wine controls...

Any Easybar dispenser operates alone or in conjunction with any other Easybar equipment & can be interfaced to automatically ring up most major Point of Sale terminals as your drink is pouring!
