## **EASYBAR SCOPE OF WORK - DRAFT BEER DISPENSING SYSTEMS**

Unless exceptions or additions are specified in writing, Easybar will:

- Measure line runs in existing beverage pathways (i.e. conduit or cable trays).
- Provide and install all beer tubing and associated fittings, connectors, etc.
- Provide and connect glycol chilling units to beer system.
- Provide and install beer cooler equipment (keg racks, cooler kits with regulators / pumps / fobs).
- Provide and install beer dispensing equipment at eight stations (dispensing towers, drip trays).
- Pump up beer at all stations.

Not generally included in scope of our work for beer equipment:

- CO2 delivery system - we will tie into existing CO2 delivery system or provide regulator for separate CO2 tank to be provided by others.
- Tappers - generally we do not supply keg couplers.
- Modification or drilling of stainless or stone - modification to stainless, concrete or stone to accommodate mounting of our equipment must be provided by others. We will modify wood with approval by appropriate parties.
- Plumbing - copper drain lines from drip pans to be provided and installed by plumbers.
- Chilled water - plumbing of chilled water to water-cooled glycol units to be provided by plumbers or refrigeration.
- Electrical - hard wire electrical connections (for glycol units) to be provided by electricians.
- Beer - beer is to be supplied by others. We will coordinate with appropriate parties to have beer on-site for pumping up.

Please keep in mind that we are always available for conference with any related parties (design, construction, electrical, plumbing, IT, etc). Feel free to contact us with any questions or concerns - contact information is below.
